PROJECTS

Food Finder (NodeJS, Typescript, React, Express, NextJS, MongoDB, Graphql, Docker) *July 2024*
Source code : github.com/tim-perez/food-finder
a *full-stack web application* for a list of restaurants about their locations developed with MERN stack where registered GitHub user can click each restaurant location to see additional details and maintain a wish list of locations.
- Wrote a single-page application in TypeScript.
- Built a backend and middleware with NextJS, Mongoose, and MongoDB, which I seeded with initial data
- Added GraphQL to expose an API layer through which I can access a user's wish list.
- Built a frontend using knowledge of React components, NextJS pages, and routing.
- Added an OAuth authorization flow with *next-auth* to let users log in with GitHub

Code Cafe (JavaScript, React, Express, Tailwind, REST) *June 2024*
Source code : github.com/tim-perez/code-cafe
a *web application* for an e-commerce site about featured food and drinks for sale developed with REACT where registered users can add items to their carts, edit their carts, checkout, and submit their orders.
- Wrote a multi-page application in JavaScript.
- Built a backend and middleware with Express which I seeded with initial data
- Added REST to expose an API layer through which I can access a user's order.
- Built a frontend using knowledge of React components and routing.

Blue Lock Quiz (JavaScript, REACT) *August 2024*
Source code : github.com/tim-perez/bl-quiz
a *quiz web application* for a 2023 top-selling manga anime "Blue Lock" featuring characters and questions developed with REACT where users can select their choice, edit their choice, and submit their answer.
- Wrote a single-page application in JavaScript.
- Built a frontend using knowledge of React components

SKILLS

Programming:	JavaScript, TypeScript, Python, C++, HTML/CSS
Technologies:	NodeJS, React, Express, NextJS, MongoDB, GraphqL
DevOps & Cloud:	Docker, AWS Amplify
Tools:	Git/Github, VS Code
