Portfolio: [tim-perez.github.io](https://tim-perez.github.io)

## PROFESSIONAL SUMMARY

Aspiring Software Engineer blending an analytical background in Psychology with strong technical proficiency in full-stack and mobile development. Experienced in building cloud-native applications and real-time multiplayer systems using modern frameworks like .NET, React, and Android MVVM. A collaborative team player who quickly absorbs new methodologies and applies technical knowledge to optimize complex workflows.

## EDUCATION

**California State University, Fullerton** | Fullerton, CA May 2026  
*Master of Science, Software Engineering* | GPA: 3.83

Relevant Coursework: Software Design & Architecture, Software Verification & Validation, Modern Software Management.

**California State Polytechnic University, Pomona** | Pomona, CA May 2024  
*Bachelor of Arts, Psychology* | GPA: 3.65

Relevant Coursework: Data Structures & Algorithms, Introduction to Programming, Introduction to Software Engineering.

Leadership: Dean's List, President's List, Academic Standing: Good.

## TECHNICAL SKILLS

Programming: C#, Java, Python, JavaScript, TypeScript, C++, HTML/CSS  
Technologies: React, Node.js, .NET, Entity Framework Core, Vite, Android Architecture Components, Dagger/Hilt  
Databases: Azure SQL, Firebase Realtime Database, PostgreSQL, MongoDB  
DevOps & Cloud: Docker, AWS, Vercel, Render, CI/CD Pipelines  
Tools: Git/GitHub, LegalConnect, VS Code, Android Studio

## PROJECTS

**EasyFile** (C# / .NET, React, Vite, Azure SQL, Docker, Entity Framework Core, Vercel, Render) May 2026  
Source code : [github.com/tim-perez/EasyFile](https://github.com/tim-perez/EasyFile) | Live App : [easy-file-eta.vercel.app](https://easy-file-eta.vercel.app)

A cloud-native web application designed to streamline the management, uploading, and organization of legal court documents.

- Engineered a scalable backend using C#/.NET and Entity Framework Core connected to an Azure SQL Database.
- Developed a responsive frontend with React and Vite, featuring Role-Based Access Control (RBAC) and dynamic UI components.
- Implemented AI-assisted document title generation and a secure soft-delete recycle bin ecosystem.
- Architected a fully automated CI/CD deployment pipeline utilizing GitHub, Vercel, and Render.

**Spotlight** (Java, Firebase Realtime Database, Dagger/Hilt, Android MVVM, LiveData) April 2026  
Source code : [github.com/tim-perez/Spotlight](https://github.com/tim-perez/Spotlight)

A peer-to-peer, real-time multiplayer party card game for Android focusing on distributed state management.

- Implemented distributed fault tolerance with a deterministic host-election algorithm to ensure seamless gameplay upon user disconnection.
- Synchronized complex game phases across remote clients with millisecond latency using Firebase Realtime Database and Android LiveData.
- Integrated enterprise-grade dependency injection via Dagger/Hilt to ensure clean separation of concerns and memory efficiency.
- Built frictionless user onboarding through custom URL scheme deep linking and developed aggressive client-side input sanitization logic.

## EXPERIENCE

**Customer Success Operator** | Rapid Legal (Proceed Legal) | Chino Hills, CA Present  
Responsible for overseeing the accuracy and compliance of assignments to ensure orders meet specific jurisdictional rules and are processed efficiently according to rigorous service level agreements.

- Manage high-volume queues of legal orders using the LegalConnect platform, maintaining meticulous attention to detail.
- Optimize operational workflows to streamline eFiling and process serving requests in a time-efficient manner.
- Provide extensive technical troubleshooting and dedicated client support regarding system requirements, pricing, and delivery.

### Workplace Skills:

- Quality Assurance (QA) & Process Optimization
- Technical Troubleshooting & Client Communication
- Data Privacy, Compliance, and Confidential Document Handling
